# 1 Measure Theory Foundations

## 1.1 Sigma-Algebras

**Definition 1.1.** A  $\sigma$ -algebra on a set  $\Omega$  is a collection  $\mathcal{F}$  of subsets of  $\Omega$  such that:

1.  $\Omega \in \mathcal{F}$
2. If  $A \in \mathcal{F}$ , then  $A^c \in \mathcal{F}$
3. If  $A_1, A_2, \dots \in \mathcal{F}$ , then  $\bigcup_{i=1}^{\infty} A_i \in \mathcal{F}$

## 1.2 Measures

**Definition 1.2.** A **measure** on a measurable space  $(\Omega, \mathcal{F})$  is a function  $\mu : \mathcal{F} \rightarrow [0, \infty]$  such that:

1.  $\mu(\emptyset) = 0$
2. If  $A_1, A_2, \dots$  are disjoint sets in  $\mathcal{F}$ , then  $\mu(\bigcup_{i=1}^{\infty} A_i) = \sum_{i=1}^{\infty} \mu(A_i)$

## 1.3 Probability Measures

**Definition 1.3.** A **probability measure**  $P$  on  $(\Omega, \mathcal{F})$  is a measure such that  $P(\Omega) = 1$ .

## 1.4 Measurable Functions

**Definition 1.4.** A function  $f : \Omega \rightarrow \mathbb{R}$  is **measurable** if for every Borel set  $B \subseteq \mathbb{R}$ ,  $f^{-1}(B) \in \mathcal{F}$ .

# 2 Random Variables

## 2.1 Definition

**Definition 2.1.** A **random variable** is a measurable function  $X : \Omega \rightarrow \mathbb{R}$ .

## 2.2 Distribution Functions

**Definition 2.2.** The **cumulative distribution function** (CDF) of random variable  $X$  is:

$$F_X(x) = P(X \leq x)$$

## 2.3 Probability Density Functions

**Definition 2.3.** For a continuous random variable  $X$ , the **probability density function** (PDF) is a function  $f_X$  such that:

$$F_X(x) = \int_{-\infty}^x f_X(t) dt$$

## 2.4 Expected Value

**Definition 2.4.** The **expected value** of random variable  $X$  is:

$$E[X] = \int_{\Omega} X(\omega) dP(\omega) = \int_{-\infty}^{\infty} x dF_X(x)$$

## 2.5 Variance

**Definition 2.5.** The **variance** of random variable  $X$  is:

$$\text{Var}(X) = E[(X - E[X])^2] = E[X^2] - (E[X])^2$$

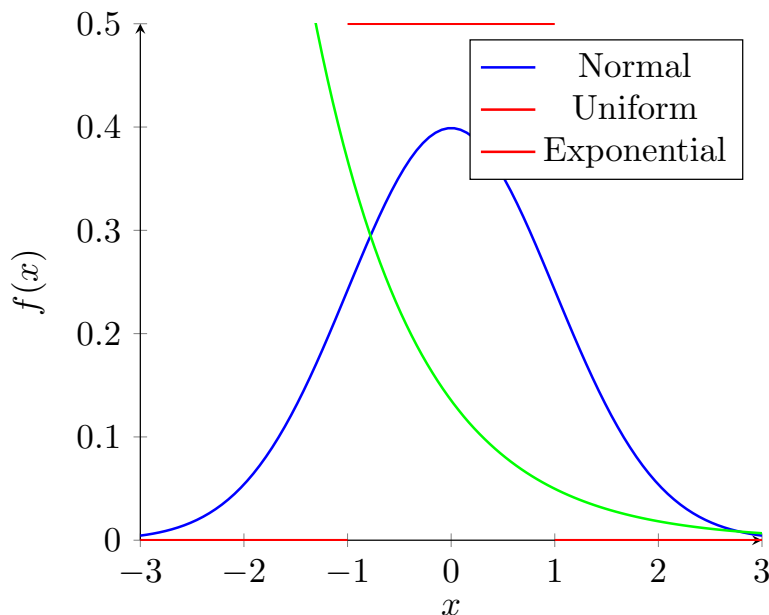

Figure 1: Common probability density functions

## 3 Common Distributions

### 3.1 Discrete Distributions

#### 3.1.1 Bernoulli Distribution

**Definition 3.1.**  $X \sim \text{Bernoulli}(p)$  if  $P(X = 1) = p$  and  $P(X = 0) = 1 - p$ .

$$E[X] = p, \quad \text{Var}(X) = p(1 - p)$$

#### 3.1.2 Binomial Distribution

**Definition 3.2.**  $X \sim \text{Binomial}(n, p)$  if  $P(X = k) = \binom{n}{k} p^k (1 - p)^{n-k}$ .

$$E[X] = np, \quad \text{Var}(X) = np(1 - p)$$

#### 3.1.3 Poisson Distribution

**Definition 3.3.**  $X \sim \text{Poisson}(\lambda)$  if  $P(X = k) = \frac{e^{-\lambda} \lambda^k}{k!}$ .

$$E[X] = \lambda, \quad \text{Var}(X) = \lambda$$

## 3.2 Continuous Distributions

### 3.2.1 Uniform Distribution

**Definition 3.4.**  $X \sim \text{Uniform}(a, b)$  has PDF  $f(x) = \frac{1}{b-a}$  for  $x \in [a, b]$ .

$$E[X] = \frac{a+b}{2}, \quad \text{Var}(X) = \frac{(b-a)^2}{12}$$

### 3.2.2 Normal Distribution

**Definition 3.5.**  $X \sim \mathcal{N}(\mu, \sigma^2)$  has PDF  $f(x) = \frac{1}{\sqrt{2\pi\sigma^2}} e^{-\frac{(x-\mu)^2}{2\sigma^2}}$ .

$$E[X] = \mu, \quad \text{Var}(X) = \sigma^2$$

### 3.2.3 Exponential Distribution

**Definition 3.6.**  $X \sim \text{Exponential}(\lambda)$  has PDF  $f(x) = \lambda e^{-\lambda x}$  for  $x \geq 0$ .

$$E[X] = \frac{1}{\lambda}, \quad \text{Var}(X) = \frac{1}{\lambda^2}$$

## 4 Convergence of Random Variables

### 4.1 Almost Sure Convergence

**Definition 4.1.**  $X_n \rightarrow X$  **almost surely** if  $P(\lim_{n \rightarrow \infty} X_n = X) = 1$ .

### 4.2 Convergence in Probability

**Definition 4.2.**  $X_n \rightarrow X$  **in probability** if for every  $\epsilon > 0$ :

$$\lim_{n \rightarrow \infty} P(|X_n - X| > \epsilon) = 0$$

### 4.3 Convergence in Distribution

**Definition 4.3.**  $X_n \rightarrow X$  **in distribution** if  $\lim_{n \rightarrow \infty} F_{X_n}(x) = F_X(x)$  for all continuity points of  $F_X$ .

### 4.4 Convergence in $L^p$

**Definition 4.4.**  $X_n \rightarrow X$  **in  $L^p$**  if  $\lim_{n \rightarrow \infty} E[|X_n - X|^p] = 0$ .

## 5 Limit Theorems

### 5.1 Law of Large Numbers

**Theorem 5.1** (Strong Law of Large Numbers). If  $X_1, X_2, \dots$  are i.i.d. with  $E[X_i] = \mu < \infty$ , then:

$$\frac{1}{n} \sum_{i=1}^n X_i \rightarrow \mu \text{ almost surely}$$

## 5.2 Central Limit Theorem

**Theorem 5.2** (Central Limit Theorem). If  $X_1, X_2, \dots$  are i.i.d. with  $E[X_i] = \mu$  and  $\text{Var}(X_i) = \sigma^2 < \infty$ , then:

$$\frac{\sqrt{n}(\bar{X}_n - \mu)}{\sigma} \xrightarrow{d} \mathcal{N}(0, 1)$$

Figure 2: Central Limit Theorem: convergence of sample means to normal distribution

## 6 Conditional Probability and Independence

### 6.1 Conditional Probability

**Definition 6.1.** The **conditional probability** of  $A$  given  $B$  is:

$$P(A|B) = \frac{P(A \cap B)}{P(B)}$$

provided  $P(B) > 0$ .

### 6.2 Independence

**Definition 6.2.** Events  $A$  and  $B$  are **independent** if  $P(A \cap B) = P(A)P(B)$ .

### 6.3 Conditional Expectation

**Definition 6.3.** The **conditional expectation**  $E[X|Y]$  is the random variable that equals  $E[X|Y = y]$  when  $Y = y$ .

## 7 Characteristic Functions

### 7.1 Definition

**Definition 7.1.** The **characteristic function** of random variable  $X$  is:

$$\phi_X(t) = E[e^{itX}] = \int_{-\infty}^{\infty} e^{itx} dF_X(x)$$

### 7.2 Properties

**Theorem 7.1.** 1.  $\phi_X(0) = 1$

2.  $|\phi_X(t)| \leq 1$

3.  $\phi_{aX+b}(t) = e^{itb} \phi_X(at)$

4. If  $X$  and  $Y$  are independent, then  $\phi_{X+Y}(t) = \phi_X(t)\phi_Y(t)$

## 8 Martingales

### 8.1 Definition

**Definition 8.1.** A sequence of random variables  $\{X_n\}$  is a **martingale** with respect to filtration  $\{\mathcal{F}_n\}$  if:

1.  $X_n$  is  $\mathcal{F}_n$ -measurable

2.  $E[|X_n|] < \infty$

3.  $E[X_{n+1}|\mathcal{F}_n] = X_n$

### 8.2 Martingale Convergence Theorem

**Theorem 8.1.** If  $\{X_n\}$  is a martingale with  $\sup_n E[|X_n|] < \infty$ , then  $X_n$  converges almost surely.

## 9 Stochastic Processes

### 9.1 Markov Chains

**Definition 9.1.** A **Markov chain** is a sequence of random variables  $\{X_n\}$  such that:

$$P(X_{n+1} = j | X_n = i, X_{n-1} = i_{n-1}, \dots, X_0 = i_0) = P(X_{n+1} = j | X_n = i)$$

### 9.2 Brownian Motion

**Definition 9.2.** **Brownian motion**  $\{B_t\}_{t \geq 0}$  is a stochastic process such that:

1.  $B_0 = 0$

2.  $B_t - B_s \sim \mathcal{N}(0, t - s)$  for  $s < t$

3. Increments are independent

4. Paths are continuous

Figure 3: Sample path of Brownian motion

## 10 Applications

### 10.1 Finance

Probability theory is fundamental to:

- Option pricing (Black-Scholes model)
- Risk management
- Portfolio optimization
- Credit risk modeling

### 10.2 Statistics

Applications include:

- Parameter estimation
- Hypothesis testing
- Confidence intervals
- Bayesian inference

### 10.3 Physics

Used in:

- Statistical mechanics
- Quantum mechanics

- Brownian motion
- Phase transitions

## 11 Important Theorems

### 11.1 Radon-Nikodym Theorem

**Theorem 11.1.** If  $\mu$  and  $\nu$  are  $\sigma$ -finite measures with  $\nu \ll \mu$ , then there exists a measurable function  $f$  such that  $\nu(A) = \int_A f d\mu$ .

### 11.2 Fubini's Theorem

**Theorem 11.2.** If  $f$  is integrable on  $X \times Y$ , then:

$$\int_{X \times Y} f d(\mu \times \nu) = \int_X \left( \int_Y f(x, y) d\nu(y) \right) d\mu(x)$$

### 11.3 Dominated Convergence Theorem

**Theorem 11.3.** If  $f_n \rightarrow f$  almost everywhere and  $|f_n| \leq g$  for some integrable  $g$ , then:

$$\lim_{n \rightarrow \infty} \int f_n d\mu = \int f d\mu$$
